

# Accessories

Add more fun to the Cadron Creek Playground pumps with our **Spout & Shout** quick connect attachment. This device sprays water from the spout as the children pump!

Spout & Shout

# Customizable!

As the manufacturer of these pump systems, we can make modifications to the pumps that your unique landscape may require.

Our product, **Elephant Snout**, came from such a customer request. If your application has special requirements let us know and we'll work with you to create the right pump system for your playground!

Elephant Snout

# About Us

Cadron Creek Play is a division of Bison Pumps, a family-owned business based in Conway, Arkansas. Cadron Creek Play specializes in Water Pumps for Playscapes.

Our pumps are often incorporated into parks, nature trails, botanical gardens, playgrounds, outdoor classrooms or children's museums. The pumps can be paired with a variety of water play accessories like troughs, water tables and more.

**Mission:** *The use of water in sensory play is an essential experience to young developing minds. Water play helps develop motor skills and problem solving skills. When using the Playground Pump, kids also benefit from social-emotional growth as they work together to pump the water. It encourages language development as children learn new vocabulary related to water science. Finally, Playground Pumps are a great STEM teaching tool. From simple mathematical concepts (full, half, empty) to more complex concepts like pounds of force required to lift x amount of water, the Playground Pump is a fun way to stimulate inquisitive minds.*

# PLAYGROUND PUMP SYSTEMS

# The Power of Play

## Cadron Creek Play's Playground Pump Systems are an exciting water play feature for your park or playground.

All our hand pump systems simulate the action of a traditional water hand pump. However, no well is needed as they are connected to a pressurized water line (such as city water). As the water in the tank is pumped down to a specified level, the water will be turned on automatically to refill the tank.

Explore Science

Our **Lil Guppy hand pumps** all come with a standard 12" long spout with a Quick Connect attachment to utilize with our accessories, 24" handle, a 3" body and a 7" flange. Made of Stainless Steel, the pumps are manufactured and hand polished at our facility in Conway, Arkansas. We offer a 5 year warranty on all manufactured parts!

### Notes:

# Engaging Fun!

Cadron Creek Play offers multiple ways for the children to enjoy the water.

Our **Pump-N-Play Playground Pump System** combines our Lil Guppy Stainless Steel hand pump with a 30" tall Stainless Steel tank. With these two units combined older children (5-12) will thoroughly enjoy the water play.

### Pump-N-Play Playground Pump System

For the smaller children (3-5) we offer the **Pump-N-Play Jr Playground Pump System**. This Stainless Steel pump & tank combination is only 39" tall which is just right for smaller children.

### Pump-N-Play Jr Playground Pump System

# Water Play!

Some landscapes call for separating the Cadron Creek Play pump from the tank. In these cases, we offer the Lil Guppy playground pump, an 8-gallon plastic tank plus reinforced hose to connect the two that we call the **Lil Guppy Playground Pump System**. With this setup the pump can be mounted on a log, rock or other structure and the tank placed in a safe location away from the play area and out of the sun.

### Lil Guppy Playground Pump System

And some playgrounds/landscapes only require the **Lil Guppy Stainless Steel hand pump**. We sell it separately for those applications.
