Pump-n-Play Playground Pump Systems

Get Ready for Inquisitive Questions Like:

- How does a hand pump work?
- How much force is required to pump the water?
- Where does the water come from... & where does it go?

The stainless-steel water play pump system invites a broader discussion about water as a resource, conservation and environmental science!

Pump-n-Play Junior

Pump-n-Play Original

Pump-n-Play w/ Elephant Snout

Pump-n-Play Junior is designed for “Little Kids” under the age of 5 years old. While the system may be used for older children, the height of the pump (39 inches) is intended for shorter kids.

Pump-n-Play Original and **Pump-n-Play with Elephant Snout** are designed for “Big Kids” between the ages of 5 and 12 years old. The overall height of the pump system (54 inches) is intended for taller and older kids.

At Cadron Creek Play, it is our mission to get kids off the screens & into the outdoors.

Children are naturally drawn to water. Whether they are playing in a bathroom sink or suddenly sprint to the nearest water fountain, kids seek out water! The Playground Pump encourages that curiosity as it enhances other skills like cooperation, understanding buoyancy, and feeling the weight of water and the amount of force required to lift it. The Pump-n-Play gives children a hands-on learning opportunity that instills a love for exploring with your senses. Feeling the water, getting wet, muddy... this is what childhood is about. THIS is how we learn about the world around us. We hope you'll join us as we encourage kids to get outside and experience the great outdoors.

Pump-n-Play Playground Pump Systems

HOW IT WORKS

Water from a pressurized water line (i.e. city water) fills the tank and automatically shuts off at the fill line. Kids then hand-pump the water out of the tank. The water refills as it's pumped out.

Pump-n-Play Pump Specs (Applies to all 3 systems)

- 24 inches tall from base to top of the handle
- Made of stainless steel: body, handle, rod, hardware
- Standard 24 inch long handle
